Prototype Video Project

Due: Wednesday, Dec. 5

Now that your prototype has been completed, it is time to complete a training video teaching others how to use your system. You will need to use video capture software such as [Camtasia](https://www.techsmith.com/camtasia.html), which can be used in the Engineering Building labs. Disclosure: Dr. Daly is a former employee of TechSmith, the company that produces Camtasia. Additionally, TechSmith frequently sponsors one of the Capstone teams each semester.

Your video should give a walkthrough of at least two scenarios in sufficient detail for the viewer to be able to replicate the behavior on their own. Extra credit will be given for three or more scenarios. These walkthroughs must be narrated; Camtasia will allow you to add audio both during recording and while editing after the fact. All of the components of your prototype must be clearly visible in the video and all text must be legible.
